CellLIVE Update

Since the global launch of the CellLIVE system in September 2015, work by exclusive global distributor, UK based MR Solutions has focused on developing and following up on leads which are expected to support sales of the CellLive system in calendar 2016.

MR Solutions has confirmed its first order (for US\$100,000) for two systems to be placed at key reference sites. These arrangements are currently being concluded and when finalised, the systems will be shipped directly to the selected sites over the next six months, but most likely early in the first quarter of calendar 2016.

Information about further sales of the CellLIVE system by Optiscan to its exclusive global distributor, MR Solutions, will be reported on an ongoing basis during calendar 2016.

About Optiscan

Optiscan is a global leader in microscopic imaging technologies for medical markets. Optiscan's unique and patented technologies enable high-powered microscopes to be miniaturised and used inside the body. The technology enables microscopic imaging of up to 1000 times magnification to be achieved. Doctors can use the technology to instantly see cellular level details of tissue without the requirement to surgically remove tissue (biopsy).

Since commencing the partnership with MR Solutions in February 2014, Optiscan and MR Solutions have worked closely to develop a powerful imaging system dedicated to the scientific research market. Optiscan's second generation platform has enabled features not possible in its first generation predecessor, including full 3D imaging capabilities and seamless integration of advanced analysis software.
